- The count values are read daily and can be accessed directly

micro People Counter sensor with display

micro People Counter sensor with display

The micro People Counter sensor is with its dimensions of only 85x53x16mm the smallest in the SDI counter sensor family. It also stands out in simple installation, extreme low power and standard wide opening capability of up to 5m or 16 ft. It has a battery life of up to 1 year on a single coin battery. Counter sensor has a side fire beam which means it will be installed flat on the wall or door frame. Display can be read out clearly and reset to zero is done easily. This counter is very useful for generating daily count values. Counts are manually readout and noted daily.

Applications

In particular very suitable to be placed at entrances. Shoulder / chest-height is the ideal height to count people. Fixing on the 'shoplifting gates' is a good option.
Horizontal technique;
Counter works through glass.

Summary

Very small versatile battery powered counter sensor. Cost effective.
